Artificial Intelligence and Machine Learning

AI has the potential to change the way your business operates. By deploying the right kind of AI technology, your business can gain an ability to:

- ▶ Save time and money by automating and optimising routine processes and tasks leading to an increase in productivity and operational efficiencies;
 - ▶ Make faster business decisions based on outputs from cognitive technologies;
 - ▶ Use insight to predict customer preferences and deliver personalised experiences increasing engagement, customer loyalty and improving sales;
 - ▶ Mine vast amounts of data to generate quality leads and grow your customer base;
 - ▶ Provide Real Time Assistance for businesses who need to continually communicate with high volumes of customers throughout the day.
- If your business hasn't yet taken the plunge talk to us. Our team helps organisations deliver enhanced throughput, speedier time to market and more personalised offerings, through our portfolio of AI services.

We help organisations capitalise on AI and Machine Learning services. To find out more about how we can help support your digital evolution, call us today on **+353 (0) 1 681 4098**, or visit us at **www.tekenable.ie**

CONVERSATIONAL INTERFACES

In 2018 over 5 billion people used messaging apps to conduct and transact business. This surpassed social media use. To meet this scale, increasingly Bots are deployed that understand Natural Language, can answer questions and integrate with existing systems (often legacy) in order to transact on behalf of the user.

We use the Cortana Intelligence platform's language understanding, translation and object classification services to build conversational interfaces that integrate with a variety of channels including Facebook, Skype, Teams Slack etc.

ROBOTIC PROCESS AUTOMATION

Robotic Process Automation enables enterprises to create true virtual workforces that drive business. At TEKenable our Ranorex Platform sets the standard for secure, scalable and cost efficient robotic process automation. Designed for use by technologists, Ranorex delivers quick deployment, reliability, low maintenance costs, and a rapid response to change.

MACHINE LEARNING

Machine Learning (ML) can solve problems for which there is no algorithmic solution (NP incomplete problems). Supervised and unsupervised learning techniques enable the creation of ML models that provide predictive outcomes which can be applied to customer retention, real time marketing and recommendation applications, driving better customer service and supporting decision making.

At TEKenable we use the Microsoft Machine Learning tools and frameworks to build, deploy and operationalise Machine Learning products and services at scale.

AUGMENTED WORKFORCE

The elimination of non-value adding tasks has always been on the Lean agenda, but it is now possible to take that a step further and automate many value adding activities that humans would once have done.

At TEKenable we work with our clients to streamline processes and create more efficient workforces utilising AI and Cognitive Technologies.

TEKENABLE

built for change

TEKenable are experts in digital evolution. We're an Irish technology company delivering digital evolution by combining modern technologies with legacy systems, to help companies build real business advantage.

As market demands continuously change, we blend innovative thinking and breakthrough technologies to produce game changing results through improved cost savings, operational efficiencies and enhanced customer experience.

We have global reach with operations in Ireland, UK and UAE, and expertise across Financial Services, Healthcare, Agri-Food and the Public Sector. In 2019, we were named Technology Business of the Year.
