A woman with short dark hair, wearing glasses and a blue denim shirt, is looking intently at a computer screen. The screen displays various data visualizations, including a bar chart with purple and green bars, and several line graphs. The background is filled with blurred lines of code and data, suggesting a technical or cybersecurity environment. The overall color palette is dominated by dark blues, greys, and oranges.

Cyber Security Threats Grow with Complexity

Innovative technologies are helping to fuel an unprecedented rise in consumer expectations. The growing integration of data, connected devices, and digital payment technologies provide huge opportunities as part of the evolving digital economy but also pose significant cyber threats. Organisations need to build cyber resilience that can keep pace with the continuously evolving digital economy.

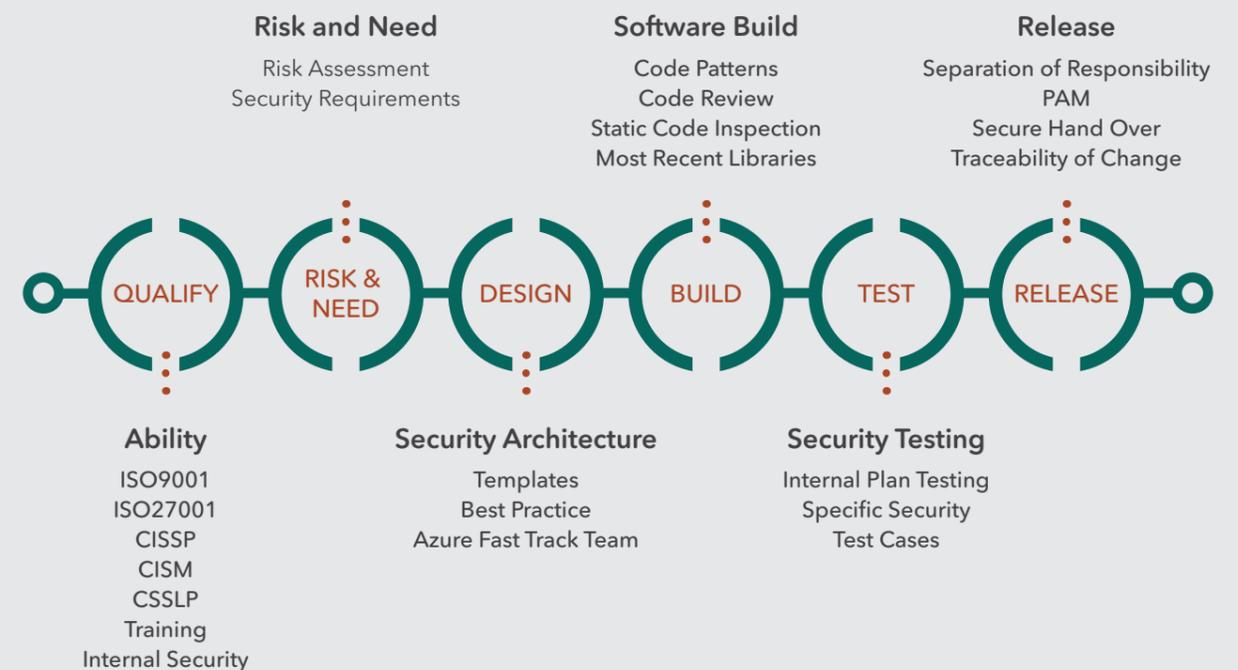

At TEKenable we help organisations prepare, protect, detect, respond and recover along all points of the security lifecycle.

Building secure software

Investments in cyber security services are at an all-time high. Despite this, successful cyber-attacks are on the rise. Organisations are now investing on an unprecedented scale - often in a tactical and reactive fashion.

Security cannot be added to software after it has been built. At TEKenable we start with the end goal in mind - beginning with a clear understanding of the needs of the software application and embedding this at each stage - from architecture, design, implementation and the testing process. We call this our Secure Software Development Life Cycle.

Our secure software development lifecycle follows a rigorous process which has been tried, tested and enhanced continuously to deliver robust security at each and every stage of the development journey.

TEKSECURE - SECURITY SOFTWARE SUITE

We have assembled a suite of software that we sell as an SAS, billed monthly including full installation and support. TEKSECURE is a suite of security which builds comprehensive resilience against the backdrop of a growing and more complex digital landscape.

Our cyber security team work closely with our clients to determine their corporate risk profile. TEKSECURE goes beyond the standard firewall and anti-virus software taking a more forensic and granular approach to your entire security lifecycle.

Our software suite includes the following products:

Phishing is a Global Pandemic responsible for over \$100bn of losses in 2018. We have a two part approach to protecting your business.

OPSWAT.

Web and email based malware is the most common threat vector, but our software suite provides a unique approach to disarm it—more effective than standard anti-virus software which has only an 80% effective rating.

Given the acceleration in digital fragmentation, cloud and mobile device security expertise are now mandatory requirements. In Microsoft's Azure and Microsoft 365 offerings there is a bewildering array of security features and capabilities. Our cyber security team identify the solution best suited to your corporate risk profile.

No software suite is complete without **Advanced AI based threat detection** and automated blocking. Especially when you do not have a 24x7 security team this software gives peace of mind.

RISK AND CYBER SECURITY CONSULTING

In addition to our security software suite, we provide advice and guidance on a wide range of cyber security topics. Our cyber security team are accredited CISSP (Certified Information Systems Security Professionals), with qualifications in CISM (Certified Information Security Management) and CSSLP (Certified Secure Software Lifecycle Professionals) – not to mention over three decades of practical real world experience delivering enterprise solutions.

FREE PHISHING AWARENESS WORKSHOPS

Phishing is the single most consistently present threat to the security of companies worldwide. With advances in perimeter defences, cyber criminals have been forced to find a new weak link in corporate security. The weakest link is no longer hardware or software but "wetware" - human users.

TEKenable run free workshops for staff in medium to large companies. Aimed at a non-technical audience including professionals from Finance, Administration, Sales and Marketing, these workshops help educate and empower staff about cyber security. Drop us a mail on info@tekenable.ie if you are interested in attending. Courses are delivered as open or in house programmes.

TEKENABLE

built for change

TEKenable are experts in digital evolution. We're an Irish technology company delivering digital evolution by combining modern technologies with legacy systems, to help companies build real business advantage.

As market demands continuously change, we blend innovative thinking and breakthrough technologies to produce game changing results through improved cost savings, operational efficiencies and enhanced customer experience.

We have global reach with operations in Ireland, UK and UAE, and expertise across Financial Services, Healthcare, Agri-Food and the Public Sector. In 2019, we were named Technology Business of the Year.
