# Microsoft Power Platform

---

Today organisations are using Microsoft Power Platform to analyse, act on, and automate their data to digitally evolve their businesses, automate processes and make business more efficient.

Power Platform combines the robust power of PowerApps, Flow and Power BI into one powerful business application platform—providing quick and easy app building and data insights.

This integrated application platform will improve your business productivity by enabling the rapid delivery of custom apps, automated workflows and advanced data analytics with a Low Code approach to improve business productivity.

## We bring the best of Microsoft technology together

At TEKenable we endeavour to turn every business in to a digital business. We bring the best of Microsoft technology together, leveraging Dynamics 365 to fully integrate business critical applications.

In today's data driven world a successful business is one that can analyse information with the intelligence to anticipate and respond to customer needs in real time.

TEKenable can help your business unlock the potential of Office 365 and Dynamics 365 by integrating Power Platform within your business. You can build, create and extend apps tailored to your business needs using Microsoft Power Platform.

*built for change*

## MICROSOFT POWERAPPS

Microsoft PowerApps enable business users to build new data capture and processing capabilities via apps, without requiring any software development expertise.

TEKenable—a Microsoft Gold Partner—has deep expertise in PowerApps which allows us to optimize processes and business transaction flows quickly. With built in integrations with Active Directory, Exchange, SharePoint and Dynamics 365 we can rapidly create apps for iOS, Android and Windows devices that operate across key Microsoft (and non-Microsoft) platforms.

## MICROSOFT FLOW

Microsoft Flow is a component of Microsoft Power Platform which allows businesses to automate time-consuming tasks and processes across multiple apps and services using Flow's Low Code builder.

Microsoft Flow automates workflows across multiple web-based services including Microsoft services for Dynamics 365, SharePoint, Outlook, OneDrive for business and other services like Salesforce. Talk to us about your integration challenges as Flow may be the solution.

## MICROSOFT POWER BI

Power BI is a Data Visualization and Business Intelligence tool which helps you collect, manage, and analyse data from different data sources into user friendly interactive dashboards and engaging BI reports.

Power BI helps you forecast the future using past and present data and statistics reports. Infused with machine learning capabilities, Power BI can spot patterns in data and use those patterns to make informed judgements and run "what if" scenarios allowing users to predict and prepare themselves for future demands.
